

Product Introduction

Gascan is a cutting-edge cloud-based management solution that transforms fuel purchases at petroleum forecourts. With 24/7 unattended fuelling and support for credit cards and in-house white cards, Gascan ensures fast, efficient, and secure transactions --- reducing wait times, simplifying payments, and enhancing overall service efficiency.

Key Features

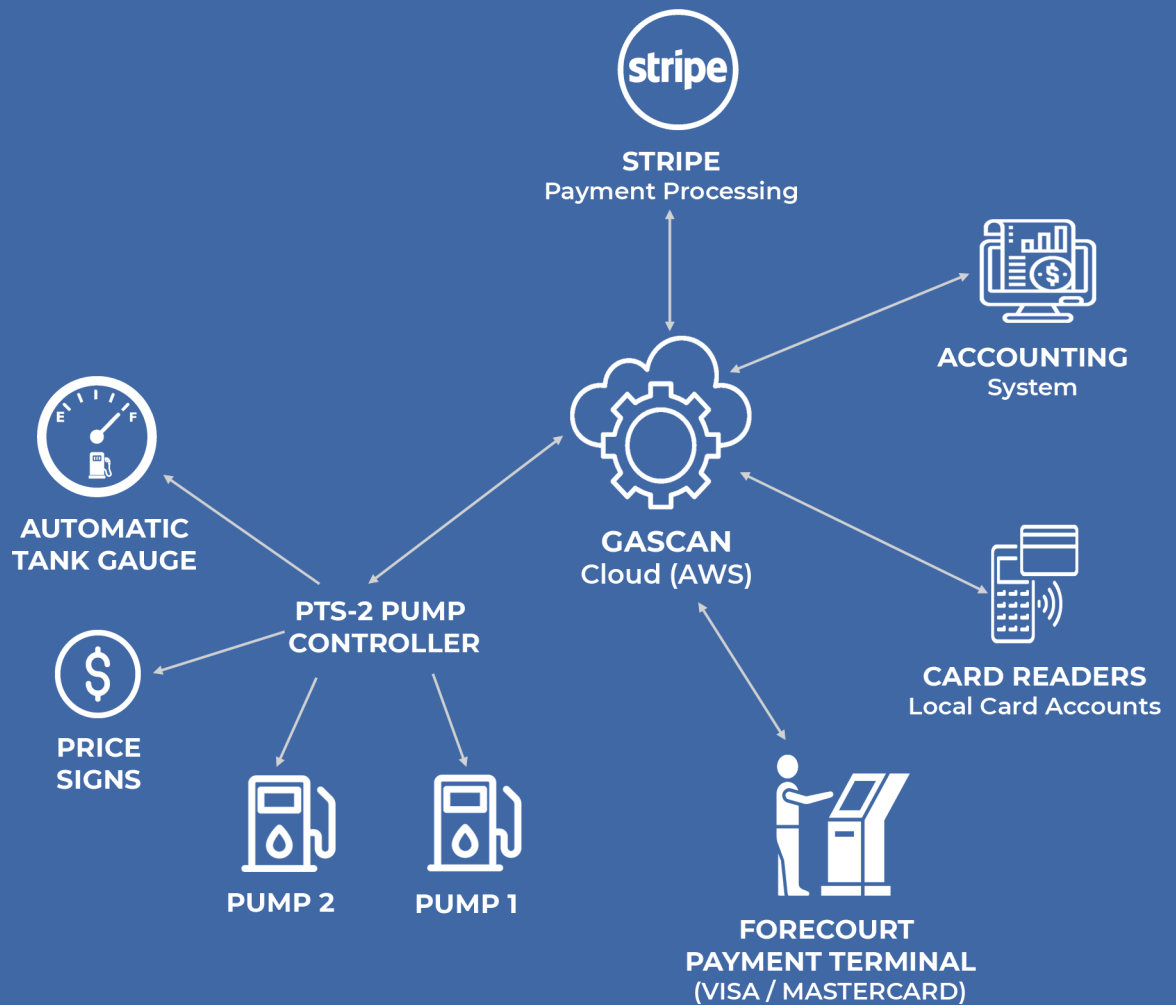

- **Support for Major Credit Cards & Tap-and-Go Payments:** Gascan enables customers to pay with ease using major credit cards and in-house white cards. With tap-and-go payment processing, customers can complete their transactions in seconds --- just tap their card or compatible mobile wallet for a seamless fueling experience.
- **Hardware and Software Integrations:** Gascan is a very small form factor with minimal hardware requirements. It integrates with a wide range of third-party devices, including tank gauging, accounting systems, price boards, and more.
- **User-Friendly Interface:** Gascan's intuitive and clean interface ensures a seamless experience by simplifying the fuel-buying process, from selecting fuel to completing payments.
- **Fast Transaction Processing:** Gascan significantly reduces transaction time, making fuel purchases faster and more efficient. It minimizes wait times at the pump, allowing for quick and hassle-free transactions.
- **One-Click Payment:** Gascan offers the one-click payment feature that allows users to pay for their fuel with a single action, making fuel transactions faster and hassle-free.
- **Customer Lookup Functionality:** With Gascan's customer lookup feature, fuel service providers can quickly access customer information for faster approval of fuel deliveries and improve operational efficiency.
- **Instant Payment Confirmation:** Gascan provides real-time transaction updates, ensuring immediate confirmation for both consumers and fuel-service providers.

Gascan.

How Gascan Works

- **GASCAN Cloud (AWS):** The central platform for data aggregation, monitoring, and command relay, synchronizing forecourt hardware, payment terminals, and back office systems while ensuring high availability and scalability via AWS infrastructure.
- **PTS-2 Pump Controller:** Connects directly to pumps, tracks fuel inventory via ATG, updates price signs in real time, and bridges on-site devices with the GASCAN cloud
- **Payment Processing & Transaction Flow:** Forecourt terminals handle VISA / Mastercard payments, while Card Readers support local accounts. Transactions are securely processed through Stripe and automatically reconciled in the Accounting System.
